Den,

I wanted to alert you to Lora's statement below regarding the arsenic in the [Ex. 6 - Personal Privacy] data. I have heard rumors, etc. that water being provided may have been worse than the water from the well (particularly from an smell, taste, odor perspective). It appears that we (ATSDR) believes that the arsenic is from provided water that may be from a lake or stream. Of course, this raises an issue with regard to being representative of the [Ex. 6 - Personal Privacy] well, but it also demonstrates the issue that even though the residents may be getting "water" from somewhere, the safeguarding of their health may not be as diligent as it should be.

More to follow on the emerging data issue.

Rich

Please see the attached summary (Dimock resident key.doc) detailing the source data locations for the max results we have been talking about for these wells.

Thank you Ann for sending me the data files tonight- I owe you BIG.

An important issue to note - the max arsenic result for the [Ex. 6 - Personal Privacy] looks like it was from provided water. I think I remember Ann you and Bob telling me the provided water was local surface water?? This issue of the source/quality of the provided water need to be confirmed via your legal folks w/Cabot. I think this issue has raised its ugly head in past - residents are being provided essentially water that they assume to be of public water quality but there may be no assurances there depending on where it is coming from.

L

Lora Siegmann Werner, ATSDR/CDC Region 3
